NEEDS.
PERSONAL
DESIGN

Make an impact.

Invent the future for your clients with furniture that defines corporate culture and effects their work-style.

Reduce your impact.

Make good environmental choices. Reduce the carbon footprint of your projects. Eliminate harmful processes and materials from the furniture; then source and build locally to conserve fuel.

Pre-engineer

Rapid soft-prototyping allows us to work out all the detail virtually as the product is developed. Control the exact size, function, material, hardware and special assembly requirements. Iterate plans a workflow that is efficient and cost effective.

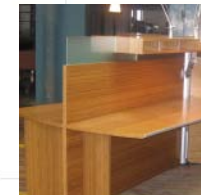

Render

State of the art 3D rendering shows you exactly what the finished products will look like and allows for multiple iterations.

Deliver and install

Cutting the distance from factory to end user conserves energy and dollars. The Iterate team will be there to supervise installation of your new furniture.

Manufacture

Iterate selects premium manufacturing partners for every stage for your project. We supervise everything from veneer layout to hardware and material selections to the processes used in building your furniture. We'll deliver exactly what you specified.

Iterate Design

19 Ohio Ave. Norwich CT 06360 203.779.0342

www.iterate-design.com

We can soft-prototype as many iterations of a design as necessary to perfect it before going into fabrication.

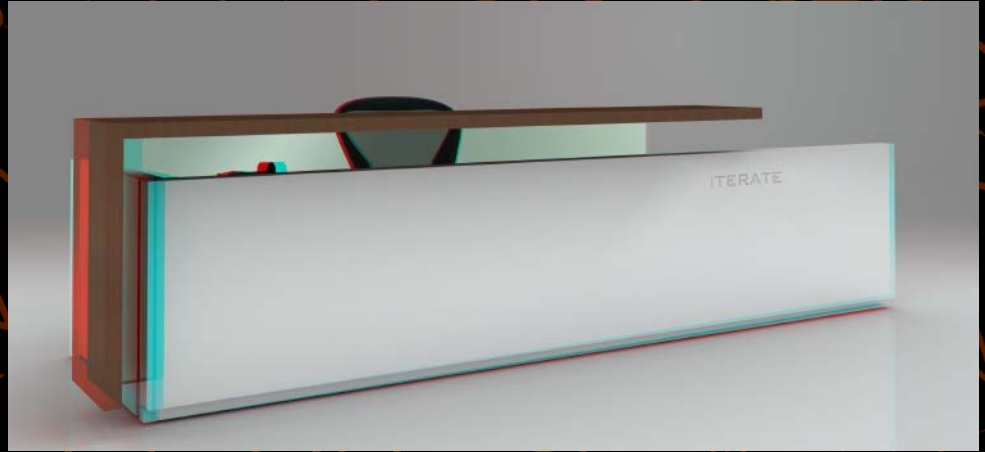

Aesthetics are balanced between function and price-point.

Progressive and environmentally responsible material palettes are encouraged.
